

Please hand in the following problems:

Problem 1: Determine the Fourier Series for each of the periodic functions depicted in the graphs below. Also, assume they periodically extend along the x -axis.

(i)

(ii)

(iii)

Problem 2: The point of this problem is to show that the two forms of the Fourier Series and Coefficients presented in class are equivalent. That is,

$$f(x) = \sum_{n=-\infty}^{\infty} d_n e^{inx} \quad \text{where} \quad d_n = \frac{1}{2\pi} \int_{-\pi}^{\pi} f(x) e^{-inx} dx$$

is the same as computing

$$f(x) = a_0 + \sum_{n=1}^{\infty} (a_n \cos(nx) + b_n \sin(nx))$$

$$\text{where } a_0 = \frac{1}{2\pi} \int_{-\pi}^{\pi} f(x) dx \quad a_n = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) \cos(nx) dx \quad b_n = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) \sin(nx) dx$$

Proof:

$$\begin{aligned} \sum_{n=-\infty}^{\infty} d_n e^{inx} &= d_0 + \sum_{n=-\infty}^{-1} d_n e^{inx} + \sum_{n=1}^{\infty} d_n e^{inx} \\ &= [\text{Details}] \\ &= \underbrace{d_0}_{a_0} + \sum_{n=1}^{\infty} \left[\underbrace{(d_{-n} + d_n)}_{a_n} \cos nx + \underbrace{(-d_{-n} + d_n)i}_{b_n} \sin nx \right] \end{aligned}$$

Answer the following:

(a) Briefly explain or show why the first equality is true.

(b) Show the [Details] above.

(c) Show that (i) $d_0 = a_0$, (ii) $d_{-n} + d_n = a_n$, (iii) $(-d_{-n} + d_n)i = b_n$,
